## **Siedle cameras: optimized range**

### **Looking sharp!**

**Siedle is updating its camera range. Two cameras for any kind of installation makes your selection easier. Both models offer optimized technology alongside new cost benefits.**

#### **Camera 180: the top-end model**

Camera 180 is Siedle's top-end model. Its state-of-the-art technology enables automatic day/night switching (true day/night visibility) with integrated infra-red lighting. It offers excellent night vision, even in complete darkness. Additional technical enhancements ensure natural colour reproduction during the day and an even sharper video image. Another compelling argument for Camera 180 is the new price.

#### **Camera 130: the all-rounder**

The optimized Siedle Camera 130 continues to be the all-rounder for a wide range of uses. With a horizontal angle of approx. 130° it captures all the essentials at the door – including at night, thanks to true day/night visibility. The revised technology can be found in the matte black ring around the lens that minimizes light reflections. This also helps boost video image quality, guaranteeing the sharpest-ever video image in the history of the Siedle Camera.

For Camera 130, we've taken care of the technology and also optimized the price.
